RUET

**Project Name:** Ruet Online Library Management System

I have developed Ruet online library management system. Now, I want to extend it .There are two functional parts :

- Admin/Librarian
- User/Student

**The functions of admin is given bellow:**

**Previous Work:**

1. At first the admin enter into homepage where he has a option to see all the books of our library without login and also he has option to login.
2. After login he can see all the student information who request for books.
3. Then admin approve this request.
4. He can see all the books ,search a particular books, add books ,delete books, issue books and return books

**Future Work:**

1. I will add a option for the admin to approve registered student for our library by sending an approval email to the particular user's email.
2. I will create a profile for each admin and he will able to manage it.
3. I will add a option for the admin to send message to the use's profile through this web site.
4. I will add a option to make available or unavailable a particular book only by clicking a button available or unavailable.
5. Admin will able to accept book issued request by sending an approval email to the user's email.

**The functions of admin is given bellow:**

**Previous Work:**

1. The users are free to register and login in our library management system.
2. Then he can see all the books and search a particular book.
3. He can send an issue request to the admin for a book.

4. He can see all his issued books.

**Future Work:**

1. I will add a option for the admin to approve registered student for our library by sending an approval email to the particular user's email. Then the user will able to login our library management.
2. I will create a profile for each user and he will able to manage it.
3. I will add a option for the user to see the message send by admin.
4. I will add a option for the users to give feedback to our libray .
